

The background of the central section is a photograph showing stacks of construction materials. On the left, there are several large stacks of light-colored, natural wood planks, likely for flooring or decking. On the right, there are stacks of reddish-brown bricks. The text "The Outdoor Timber Specialists" is overlaid on the left side of the image, in a white, serif font. The text is arranged in three lines: "The Outdoor", "Timber", and "Specialists".

H4 MCA MGP10 Treated Bearers and Joists Premium Grade New Zealand Radiata Pine

MCA Treatment has 50 year warranty against fungal decay for in ground use

TASMAN KB H4 Everjoist

We are delighted to introduce TKB's durable H4-Treated timber for low-to-ground and on-ground applications. Using Premium Grade Radiata Pine with Micronised Copper Azole (MCA) H4 Treatment, TKB's Everjoist is the superior option for low-to-ground decking applications. Offering a 50 year warranty against fungal decay for in ground use, it is the ultimate protection against the tough Australian climate.

Why Use TKB H4 Everjoist?

Inline with the Australian Standards, timber decks within 400mm of the ground, require extra consideration to minimise moisture related issues and premature decay. Unlike other products, TKB's Everjoist utilises solid, plantation grown Radiata Pine to protect your deck against fungal decay and termite attack for 50 years.

TKB's H4 Everjoist is MGP10 stress graded for superior spans and is available in a range of traditional framing sizes and lengths. It is the ultimate choice for all low-to-ground and on-ground decking applications where protection against moisture is key.

Please contact TKB for additional product information, samples and brochures.

Applications:

- On Ground Decks.
- Low Deck Subframes.
- High Moisture Areas
